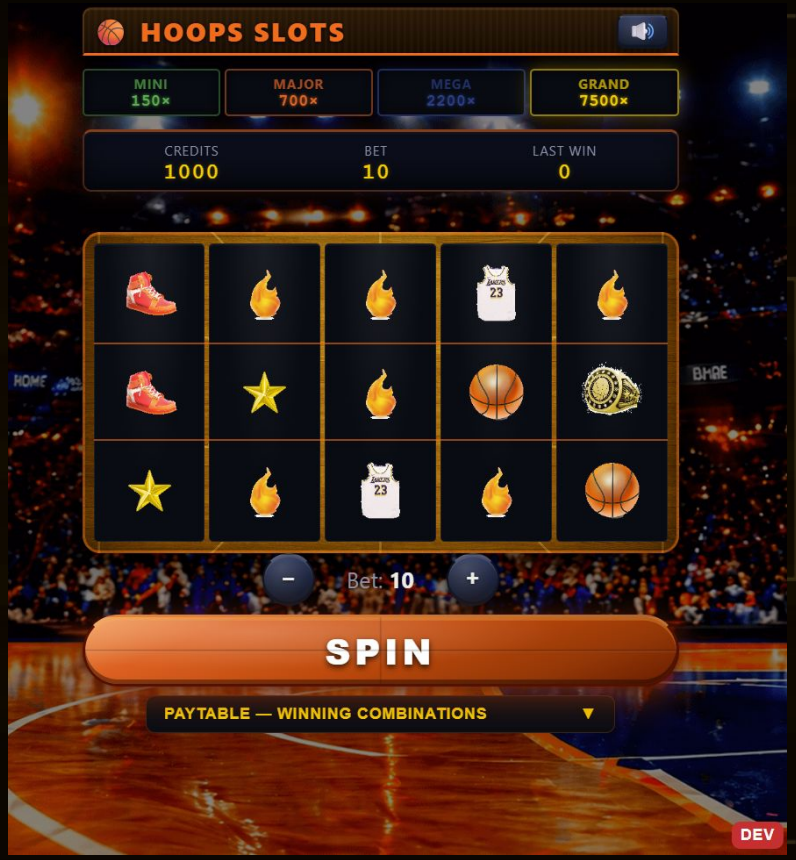
BASKETBALL-THEMED ·SONNET 4.6

AI-SLOT MACHINE.

Enter a court of gambling, powered by Claude.

TEAM #23

PART 2



OVERVIEW

Model

Sonnet 4.6
MEDIUM

Worked pretty well.

App *Components*

- **Game Math**
- **REST API**
- **Tested Client**

Aimed for realism!

20

Logged Sessions

NO HAND EDITING

✅

Linted & Tested Code

Project based on written spec!

REFINEMENT (PT. 1)

Going from zero to meh…

#1 - #2

TIME = 15 mins

→ bad game math
→ 5x3 grid, basketball theme
→ 11 changes > issues later on

→

#3 - #5

Planning Agents

→ Explore, Plan, Orchestrate
→ 13+ minutes, 187k tokens
→ file-by-file spec

→

#6

4 New Layers

→ HTML/CSS, visual effects, jackpot tier bar
→ MOST changes at once
→ issues in 13/14 later on

→

#7 - #9

Better Animations

→ GSAP (animation platform) replaced hand rolled
→ canvas confetti addition = 3 minutes, 7.7k tokens

REFINEMENT (PT. 2)

Going from meh to HERO

#10 - #12

Howler, Helmet & Zod

→ Howler unified all audio
→ Zod collapsed verbose validation chains
→ Helmet silently broke CDN scripts

#13 - #14

Bugs Bite Back :(

→ CSP blocked all three libraries
→ Music had never played once
→ Unit tests caught nothing, E2E did

#15 - #18

Almost there...

→ WSL broke nodemon, AI couldn't fix
→ Timing bug fixed, UI polished
→ App shipped, 94% RTP hit

#19 - #20

Legal & UI Polish

→ Added Privacy & disclaimer
→ Added Orbitron LED styling
→ fixed GSAP timing bugs
→UI overflow fixed for optimal sizing/padding

FINAL STATE

FROM DOWNTOWN!

CHAMPIONSHIP!

KEY FINDINGS:

- **Explore the codebase first, write a plan, then implement.**
  - *Sessions that jumped straight to implementation = bugs that later on.*
- **Unit tests aren't enough.**
  - *It was end-to-end testing and actually running the app that caught the real problems.*
- **Speed is not a GOOD sign!**
  - *Entry 1 built a working app in 15 minutes, but most of the remaining 17 sessions were spent cleaning up, refining, and fixing what that speed missed.*
- **Libraries are the best…like GENUINELY the best.**
  - *A purpose-built library replacing custom code (GSAP, Howler, Zod, canvas-confetti) = cleaner, shorter, and more reliable result!*
